

We are hiring.

We are **pmd**, the world's leading supplier of 3D image sensor technologies based on the Time-of-Flight principle. Our customers from the consumer, automotive, industrial automation, robotics and medical technology industries trust our reliable reference designs and powerful image sensors for 3D distance measurements. Our technology is integrated into smartphones, VR/AR headsets, robots, and smart home devices.

More than 300 worldwide patents in this field, numerous awards and agile, dynamic product teams characterize our strong and innovative focus. We belong to the internationally operating ifm group with more than 7.000 employees.

Can you imagine? Then join us and become a part of our team.

Physicist or Engineer (m/f/d) as System Engineer for 3D Cameras

in Shanghai, China

Your tasks:

As part of an interdisciplinary project team, together with other engineers and physicists, you will develop innovative 3D camera modules for integration into smartphones. After an extensive training phase you will be able to evaluate the influences of key components on the overall system performance and from this derive corresponding development specifications. As an all-rounder, you will support customers in all phases of product development, from design draft to series production, at our office in Shanghai as well as on-site at the customer. This also includes the development of an application- and customer-specific calibration concept, the evaluation of laser safety, the development and adaptation of algorithms to improve the quality of 3D data as well as the characterization of the camera performance. In addition, you will be involved in the demand-oriented training and general support of our customers and provide support with technical documentation.

Your profile:

- University degree in physics or engineering (or similar) and several years of relevant professional experience (or PhD graduate)
- Well-founded knowledge and safe handling of Python
- Experience in the field of data analysis
- Basic knowledge of optics or laser safety is an advantage
- Experience in system development in the consumer or automotive market is a plus
- Experience in the field of algorithm development or image processing is an advantage
- Confidence when dealing with customers
- Fluent in spoken and written English
- German language skills are an advantage
- Experience in the preparation of technical documentation
- Analytical skills, autonomous and systematic working methods
- Customer orientation and willingness to travel

Your advantages:

- Innovative work environment
- Varied and broad range of tasks
- Attractive salary with variable components
- Most modern tools and work place
- Being part of a dynamic and highly motivated team
- Flexible working time
- Regular trainings

can you imagine? We're looking forward to meet you.
